

**IT DOESN'T TAKE A LOT OF MONEY  
TO START SAVING ENERGY**

Power America Technology develops and installs power management devices that provide up to 50% reduction in power consumption, added power protection, and lower maintenance costs for electric induction motors, pumps, fans and compressors.

With 15 years of research and development in variable frequency technology for AC compressors, we are bringing guaranteed energy efficiency to our clients, as we have been continuously monitoring the stable operation and performances of myriads of AC compressors. Power America Technology also performs energy efficiency audits as part of its services portfolio.

Our clients, including major food and beverages companies, retail bank networks and technology groups across Asia, are benefiting from innovative and nimble solutions that help their business operations to be more energy efficient and save money on electricity bills.

reduce  
energy use  
**30% to 50%**

### SES-VR SERIES

This device has a smart controller and can be connected to:

- HVAC systems,
- Compressors,
- Pumps and fans

save up to  
**25%**  
electricity use

### SES-VT SERIES

tested and certified by  
the independent lab

This device can be plugged into various types of vending machines, such as:

- Vending machines,
- Freezers and ice makers
- Beverage coolers,
- Refrigerators, among others.
